RETAIL SALES ANALYSIS

Business Performance Report | 2025

A data-driven assessment of sales, profitability, branch performance and product categories.

Prepared by: Yuri Solutions & Products

Reporting period: January – December 2025

Data: Simulated retail transaction dataset created for demonstration purposes.

1. Executive Summary

The business generated total revenue of **KSh 2,505,479.50** and recorded profit of **KSh 730,249.50** during the reporting period. This represents a profit margin of **29.15%**. The analysis covers 498 cleaned transactions and 2,778 units sold.

Performance Indicator	Result
Total Revenue	KSh 2,505,479.50
Total Profit	KSh 730,249.50
Profit Margin	29.15%
Transactions	498
Units Sold	2,778

2. Branch Performance

The Meru branch recorded the highest revenue at **KSh 921,973.00**, followed by Thika and Nairobi. This suggests that branch-level differences deserve further investigation.

Branch	Revenue
Meru	KSh 921,973.00
Thika	KSh 828,490.50
Nairobi	KSh 755,016.00

3. Product Category Performance

Household was the leading category, generating KSh 933,505.00 in revenue. However, groceries recorded a comparatively low profit margin, indicating that costs and pricing may require attention.

Category	Revenue	Profit
Household	KSh 933,505.00	KSh 281,255.00
Clothing	KSh 672,510.00	KSh 234,560.00
Electronics	KSh 555,722.50	KSh 168,422.50
Groceries	KSh 343,742.00	KSh 46,012.00

4. Leading Products

The following five products generated the highest revenue:

Product	Revenue	Units Sold
Cooking Pot	KSh 601,480.00	286
Women's Dress	KSh 414,450.00	242
Bluetooth Speaker	KSh 321,300.00	190
Bedsheet	KSh 318,525.00	226
Men's Shirt	KSh 258,060.00	229

5. Monthly Sales Performance

February was the strongest month, with revenue of KSh 259,178.50. April recorded the lowest revenue at KSh 139,417.00. The business should investigate seasonal demand, promotional activity and stock availability.

6. Business Recommendations

• **Study the Meru branch:** Identify the sales practices, customer demand and product mix contributing to its strong performance.

• **Review grocery profitability:** Examine supplier prices, discounts and selling prices to understand the low margin.

• **Protect leading products:** Monitor stock levels for high-revenue products, particularly cooking pots and women's dresses.

• **Investigate monthly fluctuations:** Examine why February performed strongly while April was comparatively weak.

• **Monitor profitability:** Track profit margins alongside revenue when making pricing and expansion decisions.

7. Conclusion

The analysis indicates that the business is profitable overall, but performance varies across branches and product categories. Management can use these findings to improve pricing decisions, inventory planning and branch-level performance monitoring.
